

Forgetting Psychology

Forgetting Psychology - Forgetting. Forgetting information from short term memory (STM) can be explained using the theories of trace decay and displacement. Forgetting from long term memory (LTM) can be explained using the theories of interference and lack of consolidation. The Psychology of Forgetting and Why Memory Fails Why Time Plays Such a Key Role in Forgetting. How to Measure Forgetting. The Interference Theory. The Decay Theory of Forgetting. The Retrieval Failure Theory. The Cue-Dependent Theory of Forgetting. Final Thoughts. There are, nonetheless, two main reasons for which psychologists think we 'forget' information: You store information in your memory but are unable to remember it when you need to, but perhaps can at a later date. In this case, information is inaccessible. The human memory simply forgets ... Psychology Definition of FORGETTING: the term that is given to a person's inability to remember or recall a thing that should have been remembered. See decay theory; interference theory; motiv
